Investment universe

Great European Models SRI invests predominantly in european large and mid caps, incorporating ESG criteria into the process of selecting and analysing portfolio securities. **The fund is labelled ISR.**

Great Models Investment Process

While a limited number of companies can create value across the business cycle, the lion share of economic profit is captured by a handful of market players. The purpose of the **Great Models methodology** is to identify companies that become great as they leverage both their tangible and intangible assets.

These companies can be obvious GEMs (attractive long-term potential) as well as hidden GEMs, ie little known stories, or, stocks that are impacted by short-term risk aversion in their given segment.

We look for:

- **SOLID BUSINESS MODELS**
- **QUALITY OF THE MANAGERIAL STRATEGY**
- **VALUE CREATION THROUGHOUT MARKET CYCLES**
- **FAVORABLE MARKET ENVIRONMENT**

► Select in this universe the stocks whose couple "rating/stock market potential" is attractive

30 JUNE 2026

PORTFOLIO

The growing number of de-escalation signals — including tankers resuming transit through the Strait of Hormuz and negotiations on a 60-day ceasefire involving the reopening and demining of the waterway — drove oil prices down by nearly 20% in June (-40% from their April peak) and supported a rebound in equity markets. As a result, the stagflation scenario has become less likely, while expectations for European earnings growth of 10–12% in 2026 now appear realistic. These expectations reflect the increasing weight of technology stocks within the indices (with expected earnings growth of around 25%) as well as the sharp recovery in the energy sector. Against this backdrop, GEM significantly outperformed its benchmark.

Semiconductors (ASML, ASMi and Infineon) were the main contributors to performance during the month, supported by continued upward revisions to hyperscalers' investment plans. The sector also benefited from a supply-demand imbalance in memory components, driving prices sharply higher. Likewise, the healthcare sector regained momentum, with Straumann, for example, raising its full-year profitability guidance. During the month, we notably increased our exposure to both the chemicals and healthcare sectors.

FOCUS : STRAUMANN

SDG 3

Straumann is a Swiss company and the global leader in the premium dental implant market (with more than 35% market share), operating in over 100 countries through a multi-brand strategy and a strong focus on continuous innovation. Following a marked slowdown in growth after the post-Covid period, market expectations have now become more realistic, while the company's structural growth drivers remain firmly in place: premiumisation in emerging markets, continued consolidation of Dental Service Organizations (DSOs), and the still-low penetration of dental implants worldwide.

At the same time, profitability is improving significantly, with margin expansion guidance revised upward from +30–60bps to +140–170bps, supported by the ramp-up of the Shanghai manufacturing site and the postponement of China's new volume-based procurement tender. Despite its exposure to discretionary consumer spending, Straumann remains a key player in the medical technology sector, combining strong pricing power, continuous innovation and structural margin improvement.

Comment on Impact Indicators

The impact of the portfolio is being monitored as we want to contribute positively to the development of a sustainable economy.

▶ Breakdown by Rating ESG

We have no holdings in the portfolio with a rating below BB. Moreover, the distribution of ESG ratings in the portfolio highlights a higher number of AAA -rated securities compared to the index.

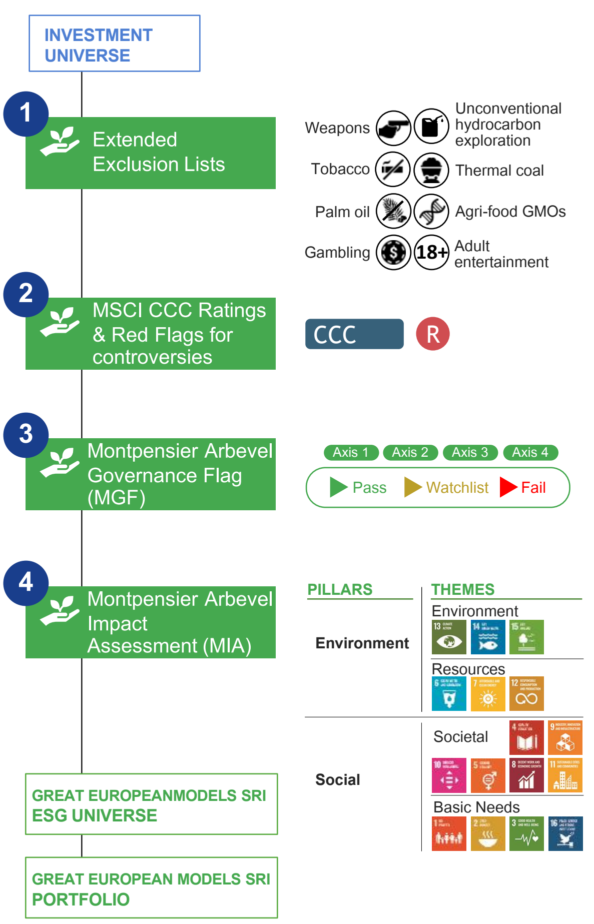
▶ SDG Impact Analysis

Our proprietary Montpensier Arbevel Impact Assessment method allows us to analyse the environmental and social impact of our stocks in line with the 17 UN SDGs. This month, for example, we find that the portfolio has a particularly positive impact on SDGs 7,9 and 12.

▶ Environmental performance

The portfolio's carbon intensity is lower than that of its benchmark.

Select **responsible** values with a **positive impact** on the environment and society



The approach of taking into account extra-financial criteria is a selective approach, based on the proprietary 4-step SRI analysis methodology, developed by Montpensier Arbevel, with the objective of mitigating sustainability risks, without however being able to guarantee that sustainability risks are totally neutralized. The data used is mainly supplied by MSCI ESG Research and may be supplemented, modified or updated by the Management Company from other sources.
